

Diane Ngo

Philadelphia, PA | 267-836-4918 | din230@lehigh.edu | [linkedin.com/in/ngo-diane](https://www.linkedin.com/in/ngo-diane)

EDUCATION

Lehigh University | *P.C. Rossin College of Engineering & Applied Science*

Expected Graduation: May 2030

Bachelor of Science, Computer Engineering (Intended)

- RARE Scholar (Rapidly Accelerated Research Experience), Lehigh University Student Scholars Institute (LUSSI)

RESEARCH EXPERIENCE

Research Intern | *Temple University Signal and Information Processing (ISIP) Lab*

June 2025 – April 2026

- Programmed machine learning algorithms in Python to automatically interpret biomedical signals, including EEG and cardiology data
- Designed and implemented novel modeling approaches for complex signal types, including pathology images, EEG, and multichannel cardiology signals
- Refined classification models from binary outputs (seizure vs. background) to a multi-label, six-category cardiac diagnosis system
- Ran and analyzed output from an EEG system, presenting findings in a final research presentation
- Strengthened technical writing and communication skills through weekly reports and feedback from weekly meetings
- Benchmarked the lab's EEG noise filter against a competing product from MindsApplied, an industry collaborator

LEADERSHIP INVOLVEMENT

Marketing Intern, Society of Asian Scientists and Engineers (SASE) | *Lehigh University*

October 2026 – Present

- Shadow SASE marketing executive board member to learn how the organization is run
- Support the marketing team's outreach and event promotion for the Lehigh chapter

PROJECT EXPERIENCE

FYRE Program, Module 1: Sensing the World | *Lehigh University*

September 2026 – Present

- Designed and fabricated interdigitated electrode (IDE) sensors using a vinyl cutter and glass slides
- Deposited and measured conductive materials (silver paste, silver paint, carbon paint) to measure baseline resistivity and resistance across different materials
- Applied a PEDOT-PSS conductive polymer via spin coating to develop humidity-responsive sensors and measured the changes in resistivity and resistance
- Advancing into microcontroller programming (Arduino Nano ESP32) and version-controlled coding via GitHub

WORK EXPERIENCE

Building Monitor | *Zoellner Arts Center, Lehigh University*

September 2026 – Present

- Supervise use of spaces during evening shifts (~11 hrs/week), ensuring spaces are properly maintained
- Conduct routine building checks and report issues to facilities staff to keep the venue safe and functional

STUDENT INVOLVEMENT

- Member, Asian Cultural Society (ACS) | Southeast Asia at Lehigh (SEAL) | Vietnamese Student Association of Lehigh (VSA) | Society of Asian Scientists and Engineers (SASE)

TECHNICAL SKILLS

Programming: Java (Basic), Python (Basic)

Tools: Visual Studio, Linux Terminal

Languages: English (Native Proficiency), Vietnamese (Limited Working Proficiency)
